July 28, 2015

Dear Representative,

On behalf of Americans for Financial Reform (AFR), we are writing to express our opposition to HR 3189, "The Federal Reserve Reform Act of 2015". Among other responsibilities, the Federal Reserve is the single most significant regulator of U.S. financial institutions, including the large Wall Street banks that played a central role in the 2008 financial crisis. HR 3189 would dramatically reduce the ability of the Federal Reserve to effectively regulate these institutions:

- Section 5 of the legislation would require the agency to give detailed advance information to major financial institutions concerning the methods that will be used for ‘stress testing’ their safety and soundness. This requirement would enable banks to ‘game’ stress test procedures in advance. It is similar to stress testing procedures used for the housing GSEs prior to the financial crisis, when the Office of Federal Housing Enterprise Oversight was also required to make the details of their stress testing models public. Section 5 of this legislation would thus force the Federal Reserve to follow the same failed path that was used for pre-crisis GSE supervision.

- Section 8 of the legislation would impose dozens of complex requirements for economic analysis that must be satisfied prior to any Federal Reserve rulemaking. Any one of these cost-benefit requirements could be used as the basis for a lawsuit by Wall Street interests seeking to avoid regulatory oversight. The Federal Reserve already performs extensive economic analysis. The effect of this section would not be to improve analysis but to enable endless lawsuits and delays prior to taking action to protect the economy.

AFR has supported reform of the Federal Reserve. This includes support for legislation on Federal Reserve transparency advanced jointly by former Representative Ron Paul and Senator Sanders, and support for legislation on ending conflicts of interest in Federal Reserve governance advanced by Representative De Fazio and Senator Sanders. More recently, we have strongly opposed the lack of appropriate accountability and limitations in the Federal Reserve’s proposed emergency lending powers, echoing criticisms that have also been made by Chairman Hensarling

---

of the Financial Services Committee. There are some provisions in this bill that we could potentially support as independent pieces of legislation. But they have been packaged with other provisions that would empower the largest banks to block effective Federal Reserve regulatory oversight of Wall Street, and place unacceptable bureaucratic burdens on the ability of the Federal Reserve to perform its regulatory functions. We urge you to oppose this legislation.

Section 5 – Requirements For Stress Tests

Section 165 of the Dodd-Frank Act requires the Federal Reserve, as the consolidated supervisor of the major bank holding companies that dominate Wall Street, to subject these financial institutions to annual supervisory ‘stress tests’. These tests are intended to serve as an objective and independent check on the financial soundness of the financial institution and the private resources it has available to absorb potential future losses due to its loans and other investments. The stress testing requirement is designed to protect taxpayers and avoid a situation like the one experienced in 2007 and 2008, where despite clear signs of financial stress the major banks distributed some $80 billion in dividends to shareholders. Later in 2008, taxpayers had to make up this lost capital through capital injections under the TARP program.

Stress tests have become crucial to the emerging post-crisis system of financial supervision. Federal Reserve Governor Tarullo has called them a ‘cornerstone’ of the regulatory response to the financial crisis. Yet the changes made in Section 5 of this bill would greatly weaken the ability of the Federal Reserve to perform effective supervisory stress testing. The legislation would require public notice and comment rulemaking in advance of any stress test, which must include details of the exact models, methodologies, and assumptions to be used in the stress test. Just as one would not require schools to provide tests to their students in advance, it is inappropriate to require the Federal Reserve to provide the details of what is intended to be an independent supervisory assessment to regulated entities in advance.

Such advance notice would allow banks to tailor their exposures to the specific methods to be used by the Federal Reserve to measure their risk. The ability to ‘game the system’ in this manner would reduce the efficacy of stress tests as an objective and external check on bank risks. It would also encourage an unhealthy private sector focus on making decisions that produced benefits under the Federal Reserve’s stress testing models, rather than pursuing independent judgments of risk and benefit. In addition, this change would allow banks to bring lawsuits under the Administrative Procedures Act to block stress test procedures they feel would reveal shortcomings in their risk management.

The last time similar regulatory requirements were imposed on a Federal financial regulator was the Office of Federal Housing Enterprise Oversight (OFHEO) prior to the financial crisis.

---

OFHEO was statutorily required to provide the public and the housing GSEs with advance details of the exact stress testing models and methodologies used to test GSE housing portfolios. The result of providing the exact details of these models in advance was that stress testing was eventually turned into a meaningless paperwork exercise that could be ‘gamed’ by the GSEs, and incentives for model development by GSE supervisors were lacking. Of course, OFHEO capital supervision of the GSEs prior to the crisis was a spectacular failure, as the GSEs became massively overleveraged and eventually had to be placed into conservatorship. We should not require the Federal Reserve to follow the same failed path.

More information concerning the stress testing process, possibly including some modeling assumptions, could be useful for the public to better understand the strengths and weaknesses of stress tests as a supervisory method. But the Federal Reserve does already provide significant transparency into the stress test process, both in its post-test announcements of results and through events such as the annual Stress Test Modeling Symposiums sponsored by the Boston Federal Reserve. Furthermore, it is crucial that any additional transparency be created in a manner that does not reduce the value and efficacy of stress tests as an independent supervisory check on bank risks. The changes in this bill certainly do not meet this requirement.

Section 8 – Requirements for Cost Benefit Analysis

Section 8 of HR 3189 imposes over a dozen new requirements for economic and cost-benefit analysis prior to any Federal Reserve rulemaking, or interpretation of an existing rule or law. Indeed, since the section also requires the agency to assess the economic impacts of the potentially numerous alternatives to the regulation actually proposed, the additional analyses required by this legislation are certain to be far greater.

Because these new requirements are placed in statute, any Wall Street interest seeking to block a Federal Reserve rule could sue in court by contesting the Federal Reserve’s findings on any of these numerous requirements for economic analysis. (This is a crucial distinction between these statutory requirements and cost-benefit language in executive orders or recommendations). Due to the inherent uncertainty and difficulty in the quantitative measurement of the impact of financial regulations, including hypothetical alternatives to such regulations, it will always be possible for industry-funded researchers to contest them in some way. For example, an extensive industry-funded study of new global capital rules claimed that they would raise U.S. lending rates by over 4.6 percentage points – between eight and sixteen times higher than the estimates found by multiple independent studies. Even genuinely independent studies can show significant uncertainties in the future impacts of financial regulations.

---

7 The industry-funded report is Institute for International Finance, “The Cumulative Impact on The Global Economy of Changes In The Financial Regulatory Framework”, Washington, DC, September 6, 2011. See Table I.1 for U.S. lending rate estimate. For an example of independent studies finding far lower impacts, see e.g. Santos, Andre Olveira and Douglas Elliot, “Estimating the Costs of Financial Regulation”, International Monetary Fund, IMF Staff Discussion Note SDN 12/11, September 11, 2012. See Table 6 for cumulative U.S. lending rate estimate. This study also provides a literature review of other studies.
8 For example, international regulators consulted seven different academic models in estimating the benefits of raising bank capital standards. While on average these models showed strong benefits from increasing...
In this context, it is worth noting that the Federal Reserve employs more PhD economists than any other institution in the world, and already performs extensive economic analysis on the impact of its regulations. For example, the Federal Reserve played a central role in the analysis of the economic impact of new Basel Committee capital standards and global derivatives rules. As part of this analysis, at least four different major impact assessments were published, each of which drew on dozens of different academic and regulatory economic analyses.\(^9\)

The effect of the cost-benefit provisions in this legislation would not be to improve economic analysis at the Federal Reserve. Instead, it will enable endless lawsuits by Wall Street interests designed to block efforts to make our economy safer.

Section 10 – International Negotiations

Section 10 of this bill requires an extensive schedule of public consultation and comment before and after any employee of the Federal Reserve Board “enters into negotiations” with any foreign or multinational entity. Similar requirements are applied to the Secretary of the Treasury and the Board of the FDIC.

The regulation of global financial markets involves extensive consultations with foreign regulators, including regulators of banks active in the U.S. markets, and interactions with foreign and multinational entities are routine for U.S. regulators. The vague definition of ‘enters into negotiations’ and the extensive consultation requirements in this section would place a crushing administrative burden on financial regulators, potentially requiring volumes of paperwork before any meeting with their international counterparts.

This section also fundamentally misconstrues the nature of international bodies such as the Financial Stability Board and the Basel Committee on Banking Supervision. Such bodies have no standing under U.S. law. They are not-for-profit organizations that serve as forums for international regulators to meet and discuss issues. Thus, the reference in this section to these organizations having “authority to coordinate financial regulation on a global or regional level” is simply false, as they have no such formal authority.\(^10\) Decisions by these bodies have no effect on U.S. law unless and until they are formally proposed by U.S. regulators using notice and comment rulemaking under the Administrative Procedures Act. The public therefore has

capital from current levels, the benefits varied from extremely high to in one case almost zero. See Annex II, Table A2.1, in Basel Committee on Banking Supervision, “An Assessment of the Long-Term Economic Impacts of Stronger Capital and Liquidity Requirements”, Bank of International Settlements, August, 2010.

\(^10\) P. 36, Lines 1-2 of the Discussion Draft.
ample opportunity to consider and comment on any regulation that results from discussion in international bodies.

It is also ironic that this section does not improve or increase public transparency in an area where improved public transparency is desperately needed, namely international trade negotiations and the activities of the U.S. Trade Representative (USTR) regarding financial regulatory issues. The USTR conducts extensive multi-year negotiations that can have profound impacts on a range of financial regulatory issues, and that are essentially secret to the public. In contrast, financial regulators, including multinational consultative groups, provide significant detail on their regulatory recommendations and proposals to the public, and solicit public comment in advance of final recommendations.\(^{11}\)

While AFR would favor improved transparency measures for international negotiations, such transparency must be compatible with the capacity of financial regulators to work with their international counterparts free of excessive bureaucratic burdens.

In sum, we urge you to reject HR 3189. The effect of this bill would be to empower Wall Street to prevent effective Federal Reserve oversight of the nation’s largest banks.

Thank you for the opportunity to express our views on this legislation. Should you have additional questions on this issue, please contact Marcus Stanley, AFR’s Policy Director, at marcus@ourfinancialsecurity.org or 202-466-3672.

Sincerely,

Americans for Financial Reform
